

lichtline

led light profession

LEDs FOR FUTURE 2022/2023

The Lighting Industry, an efficient way

lichtline is a young, growing company headquartered in Bayreuth, Upper Franconia. We are your specialist for commercial and industrial lighting and you benefit from a wide range of services and high-quality products in the field of lighting technology and lighting planning. Industry-specific know-how, advanced LED technology, innovative and individual solutions as well as assistance service together with the high-quality products offer you an allround carefree package.

With dedication, all **lichtline** colleagues are looking for the best solution for you and at the same time we make a positive contribution to a better world together.
Take a look at our year 2022/23.

New products

For the sake of nature

In order to meet your requirements and to follow our passion for research and development, we are constantly expanding our range. Also this year we will provide you with insights into the lighting solutions of tomorrow, so that your everyday challenges can be solved.

Sustained

Investment for the future

The facts are on the table, our nature needs help. If we do not counteract climate change, future generations will find a completely different world.

Sustainability must therefore be the priority. The use of renewable energies is one thing, conserving existing resources and using them effectively is another.

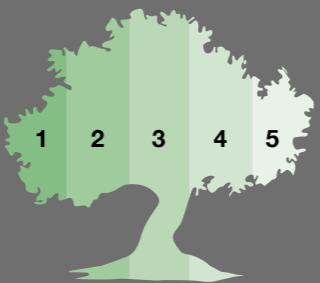

Using unused energy is one of the best ways to conserve resources. Because 15% of our global electricity consumption is due to our lighting. By converting to LED, an average of 80% of this power consumption can be reduced.

In the lighting industry, sustainability takes place, among other things, through resource conservation. Efficient light sources, optimized luminaires and electronic controls can contribute a lot to sustainable development, and they are also largely recyclable and save costs. The federal government supports this development with subsidies.

We at lichtline also want to stand up for our environment and in this catalog we are using an environmental icon to bring our investment in the future closer to you.

**Sustainability at lichtline**

For the sake of nature, we have designed a symbol that should make the sustainability at lichtline clear to you. The symbol is filled with 5 categories.

**Efficiency**

The first field serves to illustrate the efficiency and thus the CO₂ savings of the light.

BAFA Eligible

The second field shows whether the lamp meets the criteria for BAFA-support. Since January 1, 2021, the state has been supporting the switch to energy-efficient lighting and thus promoting our climate protection.

Packaging

If the fourth field is filled in, the lamp will be sent in sustainable packaging. We pay attention to renewable raw materials and waste consumption. Waste separation is often no longer necessary, which also saves time and money.

Longevity

The third field describes the longevity of our lights. If a lamp is particularly durable, it requires less servicing and conserves resources.

Electronic Control

If the fifth field is filled in, the lamp can be equipped with an electronic control. Sensors in particular ensure immense power savings through day and night rhythms or dimming functions.

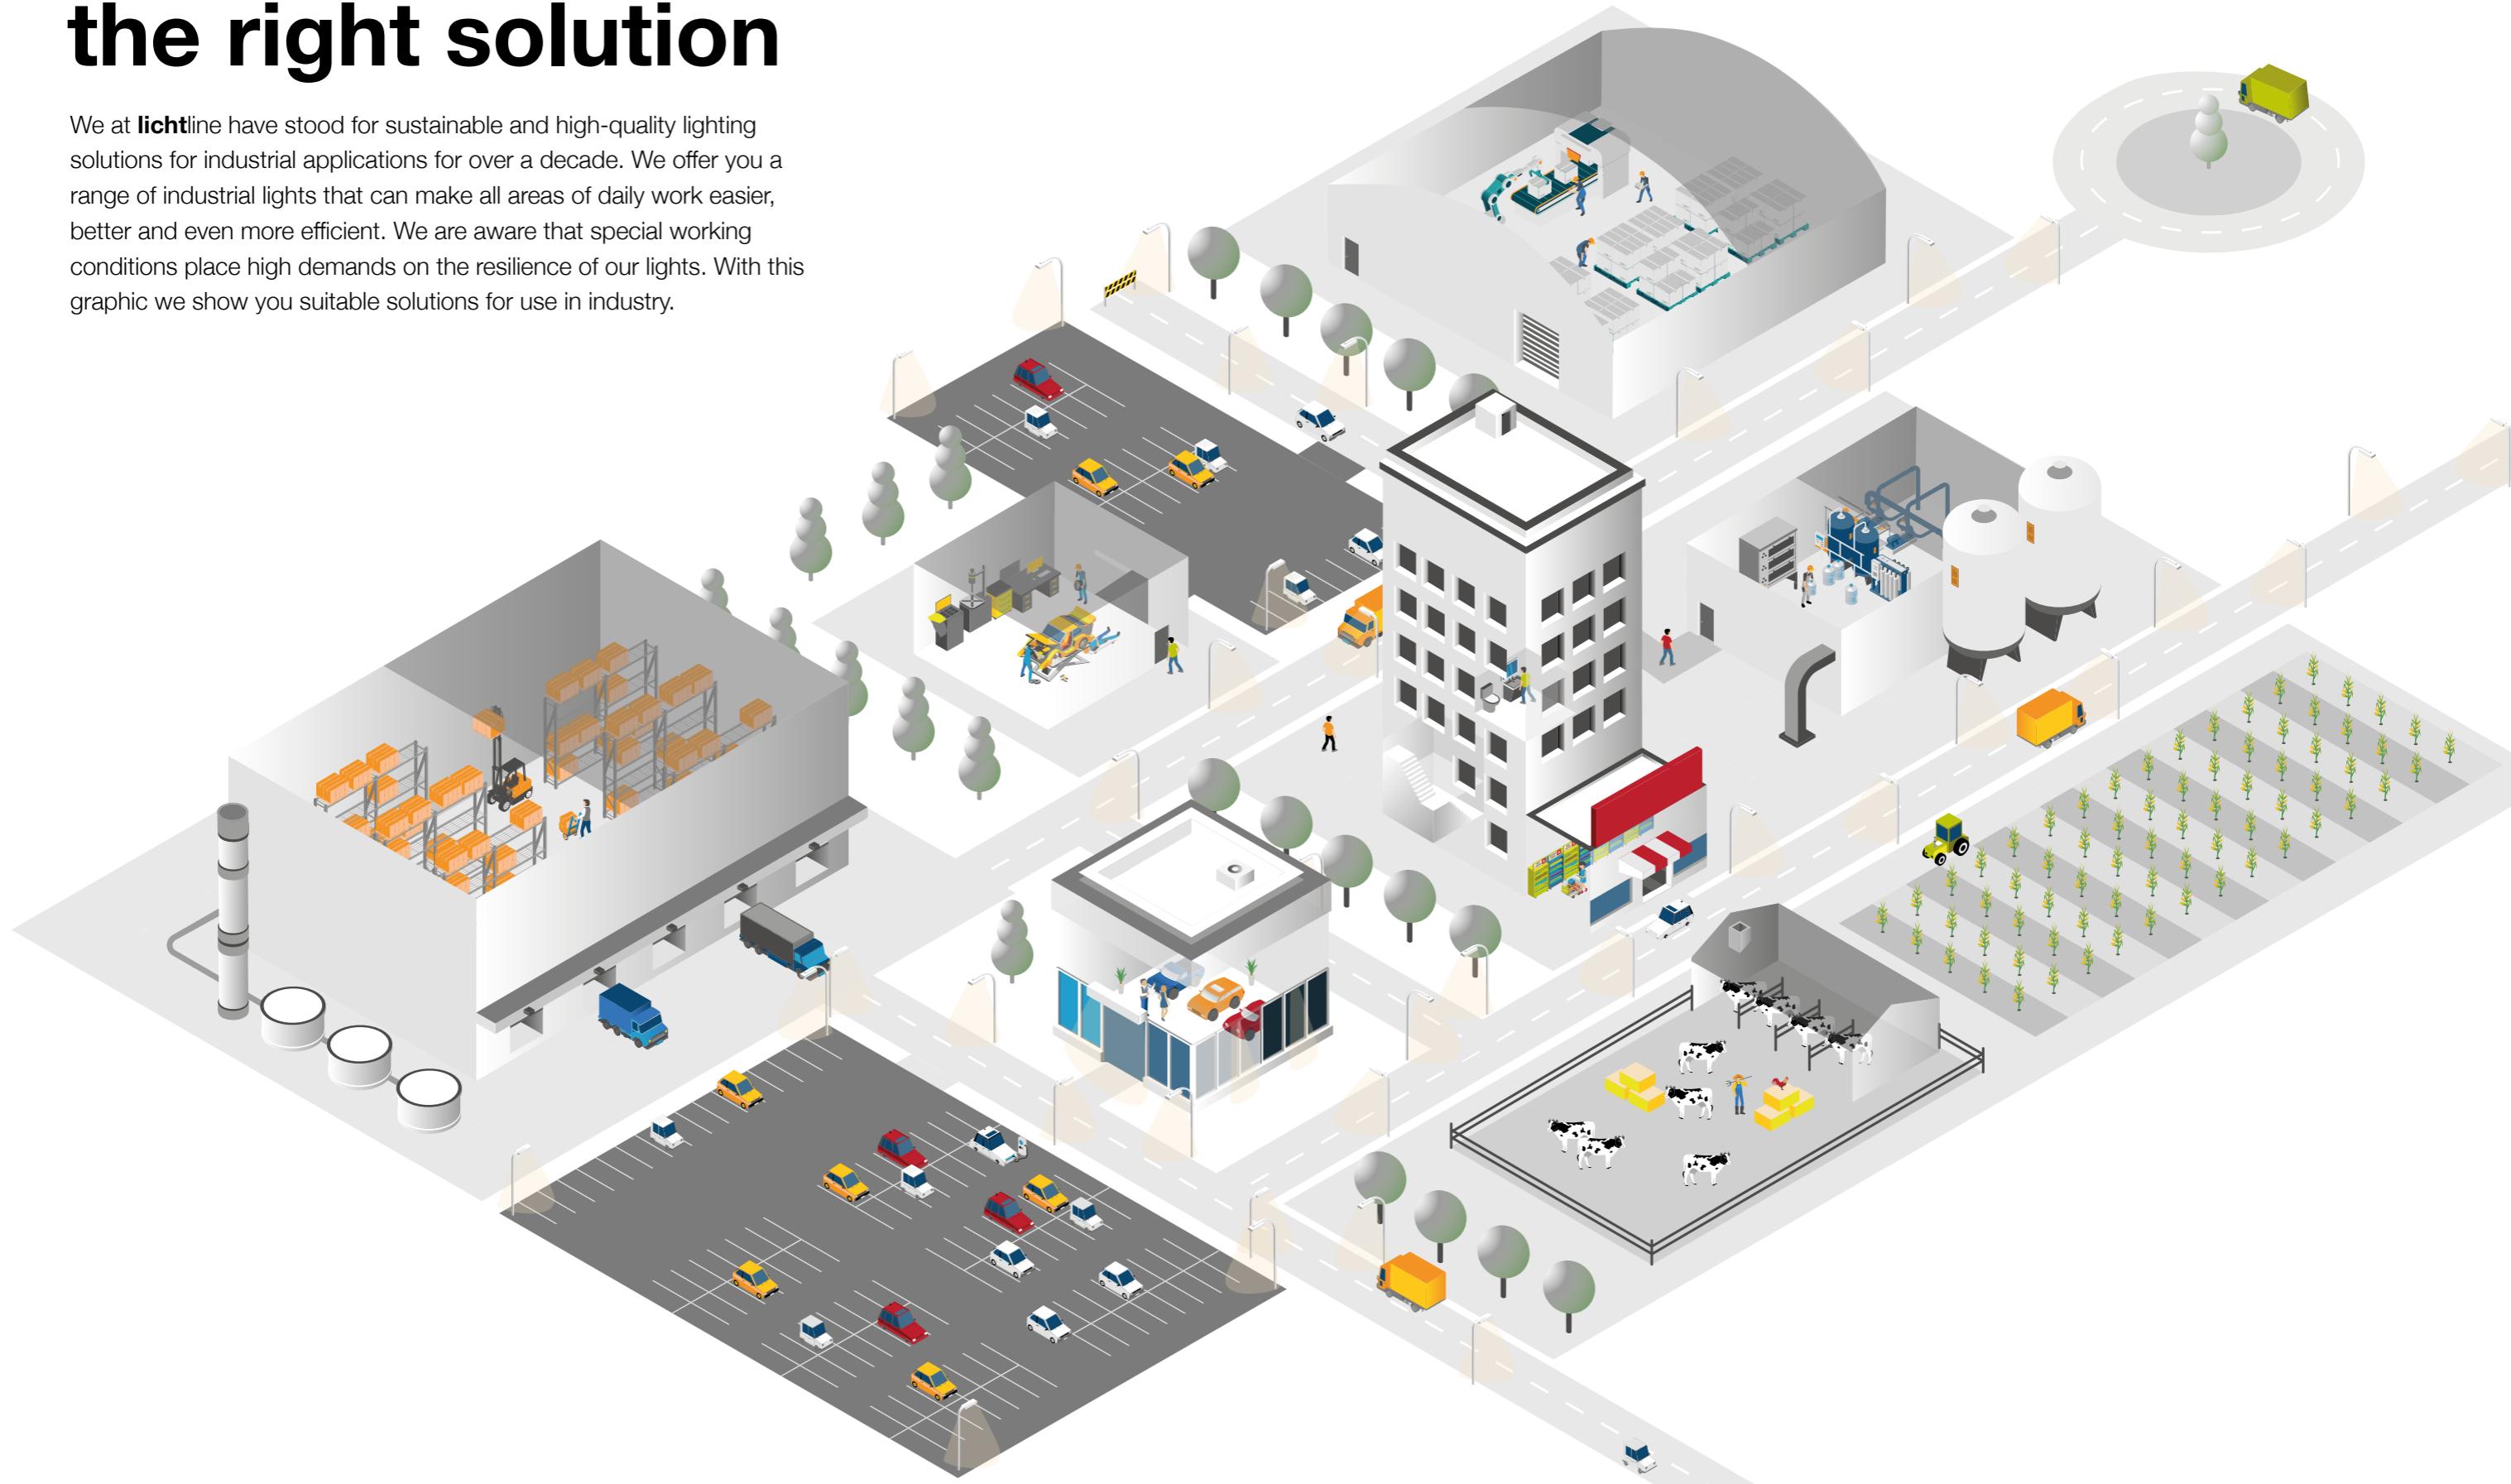

10 facts of modern lighting

1. LEDs not only save energy, they also combine high light quality with a long service life.
2. In outdoor lighting, LEDs reduce light emissions and protect nocturnal insects.
3. LEDs convince with a very good ecological balance, as they cause over 90% of their CO₂ emissions during operation and only 2% during production.
4. Luminaires with high efficiency and a long service life save electricity and maintenance costs.
5. LED lights have low heat emission, which means that less cooling capacity is required in air-conditioned rooms.
6. Intelligent light management can reduce energy consumption by a further 70%.
7. The packaging is preferably made of recyclable materials and harmful ingredients are avoided as strictly as possible in accordance with the applicable regulations.
8. Professional lighting planning ensures that lighting is used as required.
9. Sustainably planned light serves people, because it ensures safety on streets and squares, protects health at work and leisure and improves well-being.
10. Whether narrowly bundled or widely spread, modern lens technology directs the light exactly where it is needed, thereby reducing losses.

Applications

For every use the right solution

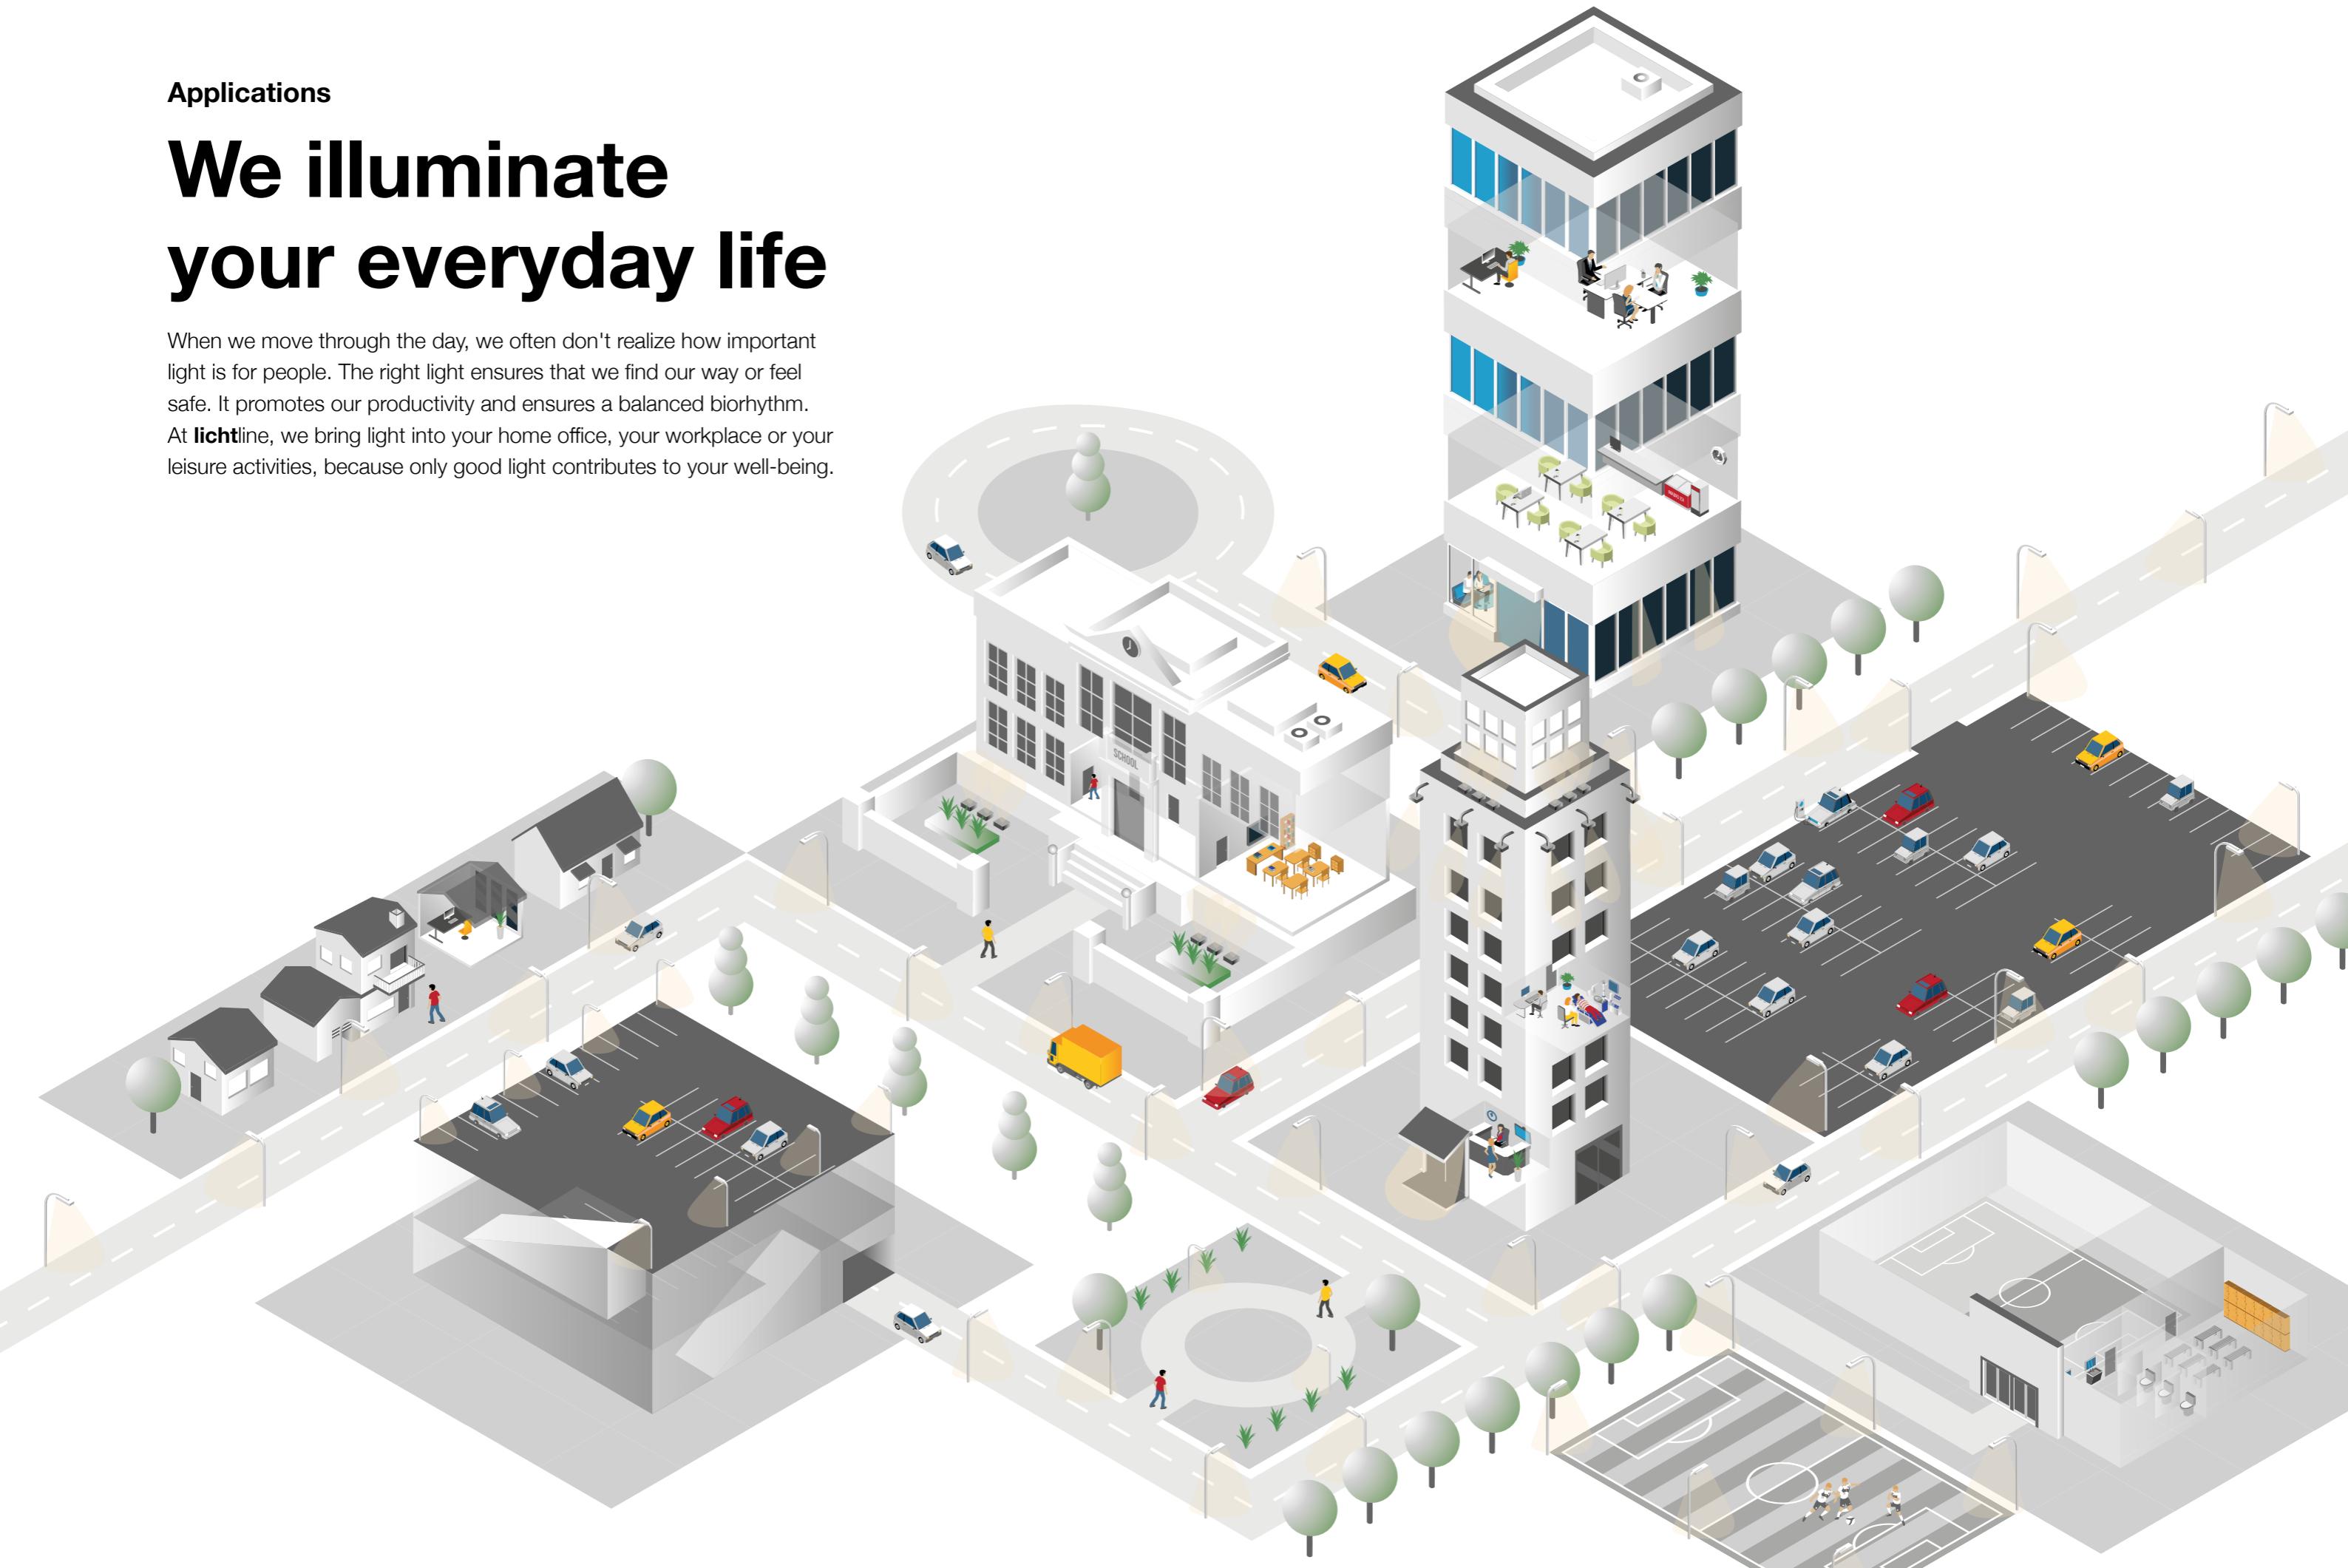

We at **lichtline** have stood for sustainable and high-quality lighting solutions for industrial applications for over a decade. We offer you a range of industrial lights that can make all areas of daily work easier, better and even more efficient. We are aware that special working conditions place high demands on the resilience of our lights. With this graphic we show you suitable solutions for use in industry.

Applications

We illuminate your everyday life

When we move through the day, we often don't realize how important light is for people. The right light ensures that we find our way or feel safe. It promotes our productivity and ensures a balanced biorhythm. At **lichtline**, we bring light into your home office, your workplace or your leisure activities, because only good light contributes to your well-being.

The world of

Sensors

Secure. Durable. Smart.

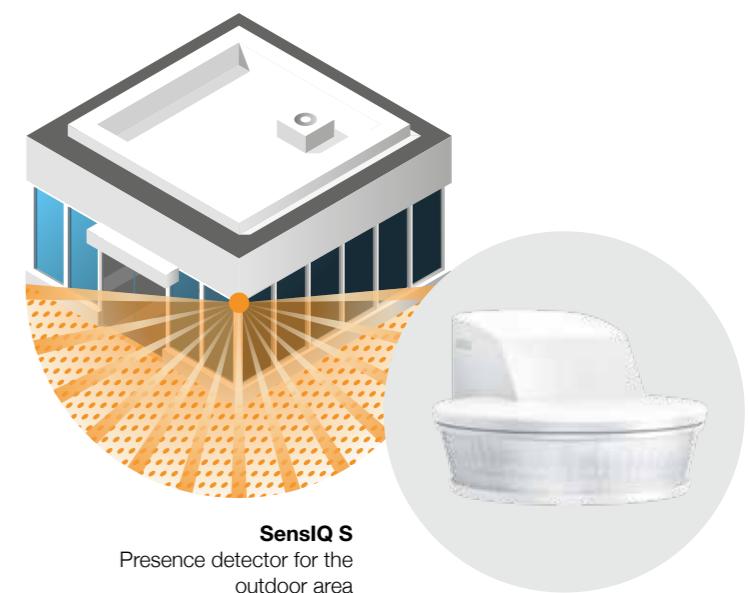

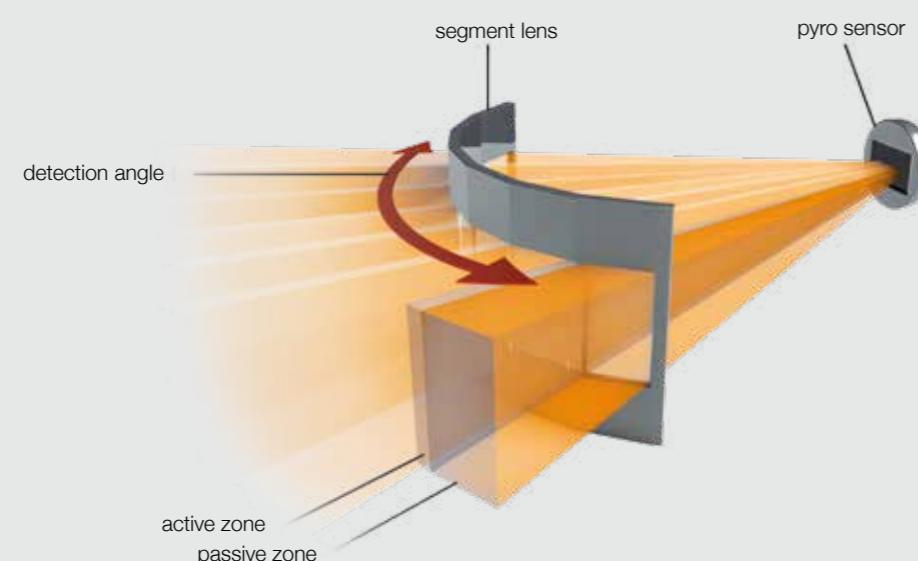

For everyone who wants to add even more comfort to their lives, we offer digital and intelligent perspectives for modern building technologies. Smart sensor technology reduces the already low energy costs of LEDs to a further minimum. The resulting savings potential leads to a reduction in CO₂-emissions and saves on building costs. So if you want to protect both the climate and your wallet, this is the place for you.

With the intelligent combination of lights and sensors, we open up completely new dimensions for your building efficiency. With our partner "Steinel" we create lighting solutions for your future.

PIR-sensor (Passive Infrared) technology

The PIR-sensor combines thermal energy with movements. For the implementation of the PIR technology, the sensor field of view is divided into active and passive segments. Since only moving objects that actually emit heat are detected, the sensor switches the light on automatically. If there is no warm movement, the light goes out. So energy is only consumed when it is really needed.

More intelligence for our lights, more planning security for you

All Steinel sensors shown here can be fully combined with the lichtline luminaire portfolio. Do you want to know what options your building has? Our external sales team measures on site your savings potential and will be happy to advise you.

You can find detailed information in the order overview on page 190.

Emergency lighting

For your security

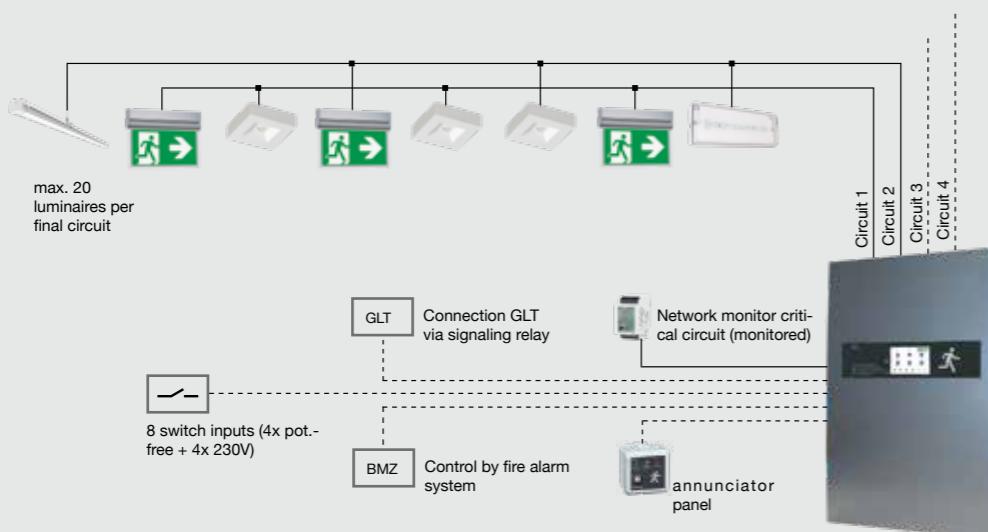

If the power supply for the general artificial lighting fails in an emergency situation, steadily illumination and a high recognition distance are important. Perfect lighting and marking of escape and rescue routes enable people to complete their work and leave the building quickly and safely.

Thanks to the combination of **lichtline** lights and the integrated solutions from our partner company Luxon Notlicht GmbH, there are no limits to the planning. For your safe reachment of your destination.

Individual and central battery systems of the future

We offer you emergency lighting solutions for your existing building or your new building. We adapt the lighting to your environmental requirements. Whether as an escape sign, an integrated solution in the light line or an emergency light as a single light, together we will develop your emergency lighting concept for the future based on your requirements, fire protection regulations and existing documents.

Your project in good hands

Our **lichtline** team takes care of your emergency lighting solution of the future, from advice to planning. Most of the **lichtline** lights are not only efficient and durable, but also suitable for use as emergency lighting. Corresponding information can be found in the technical data on the product pages. In an emergency, this could save your life or keep operations running. Contact us.

Trunking Systems

Whether for high bay warehouses or consecutive illumination - flexibility and ease of assembly are essential for trunking systems. Our trunking systems are also suitable for high ceilings where low-loss and aligned illumination is important. Because of the well thought-out design, the luminaires impress with future-proof control, high luminous efficacy and energy efficiency as well as fast installation, which saves the customer time and money. Regardless of whether it is a new installation or a refurbishment project.

Two meters that change the world

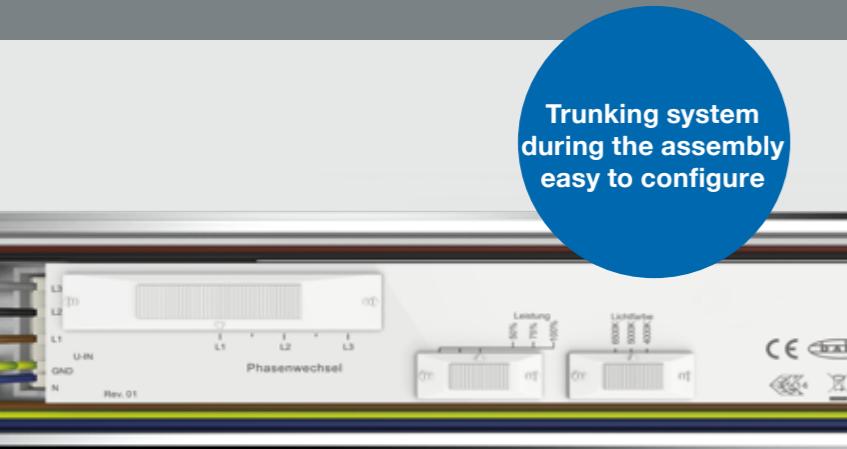

Economy along the entire length. Due to the optimized length of 2000 mm and the few assembly steps required, the system is particularly easy to plan. All the necessary accessories are included in the scope of delivery, so the ROCKET can be installed right out of the box. This saves time in project planning and installation. Our ClickLUX ROCKET is packaged ecologically from renewable raw materials. This not only protects our environment, but saves you the tedious task of separating waste.

Installed in no time

The ClickLUX ROCKET can be mechanically and electrically connected in just one movement. Due to the optimized length, significantly fewer suspension points are required for the installation. In combination with the tool-free assembly, **up to 33%** assembly time can be saved. In order to obtain a finished Trunking system, only the connection set is required. If you have any questions about the installation height and project implementation, please contact our light planning service.

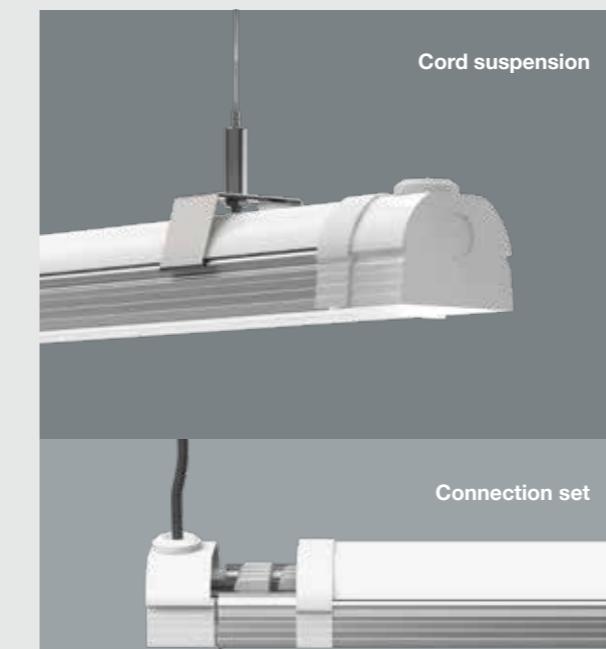

Trunking system
during the assembly
easy to configure

Unbeatably clever

Select the **light colour, phase** and **light output** using the switch before or during installation. Our industry-optimized control gear adapts the light strip to every situation with a click - and it's integrated as standard.

Assembly

One click and already mounted.

Due to the clever LED trunking system a simple and tool-free installation of the ClickLUX RELIGHT 2.0 is no problem.

ClickLUX 2.0 SL

Because of the innovative **single-lens technology**, we can react flexibly to any challenge and thus ensure perfect illumination.

Mounting system

1. Hook in

After removing the old light module, insert the mounting aid.

15 sec.

2. Connect supply line

Connect the supply cable and hook the light module into the mounting rail.

30 sec.

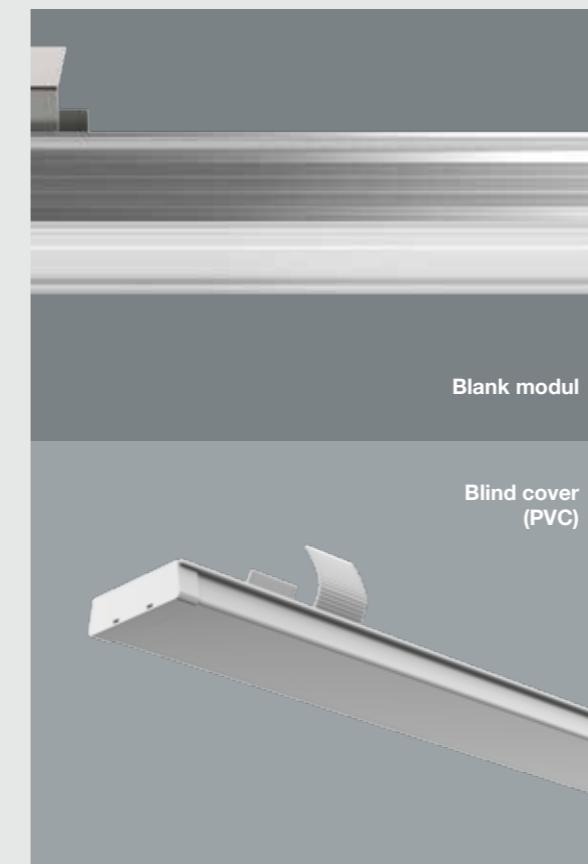

3. Click!

The light module snaps into the mounting rail with a click.

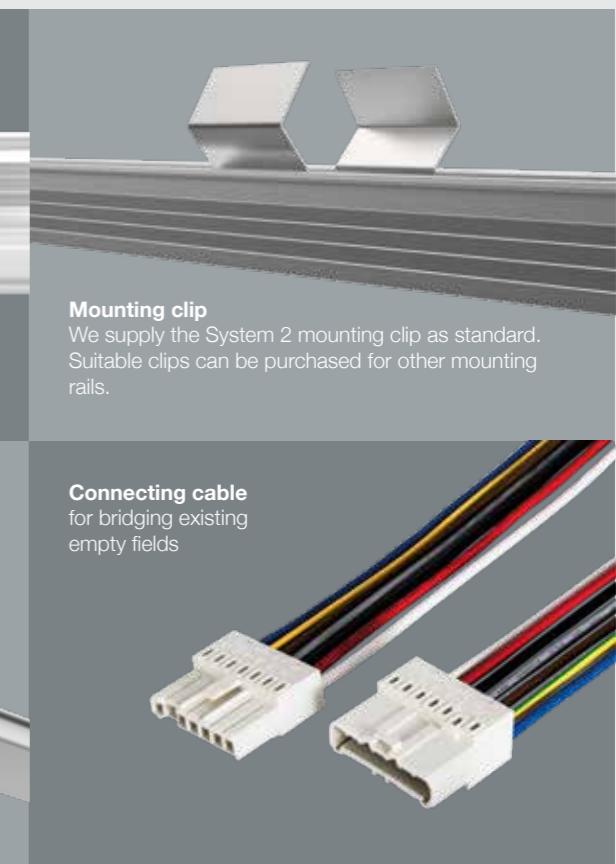

60 sec.

Accessories

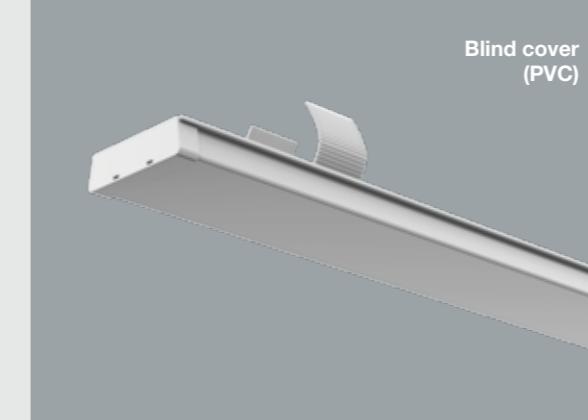

Blank modul

Mounting clip

We supply the System 2 mounting clip as standard. Suitable clips can be purchased for other mounting rails.

Blind cover (PVC)

Damp-proof luminaires

Dust, water and cold place high demands on a damp-proof luminaires every day. Due to many years of industrial expertise, we at lichtline have exactly the right lighting solution for use in demanding environments. Whether in cold stores, cellars, industrial kitchens, production halls or car washes - the robust construction and the weather and UV-resistant material meet almost all requirements in damp rooms.

with TUBOLA MOTION

Dimensions in mm

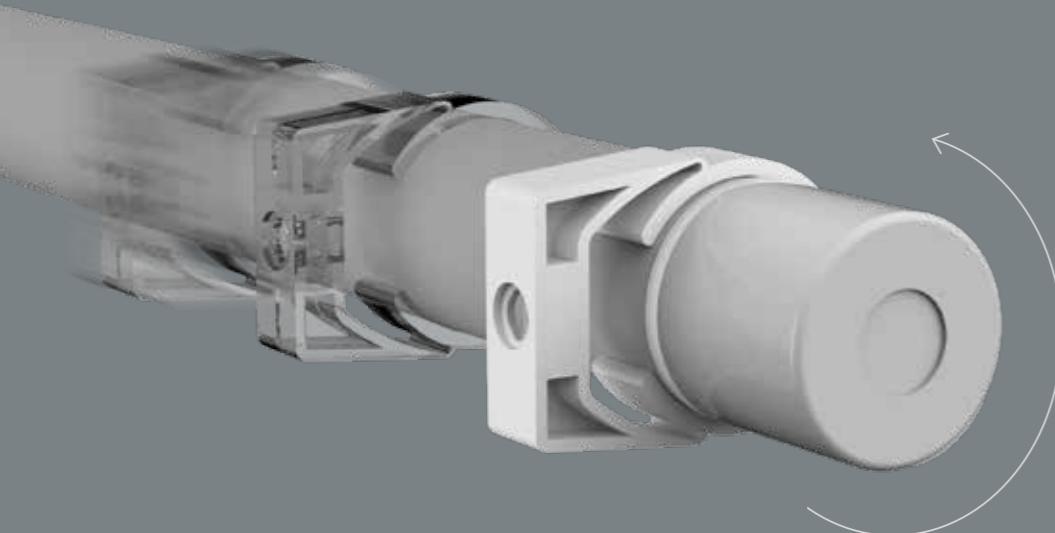

Assembly

Unbeatably flexible. Due the enclosed mounting clamps with quick-release fastener, simple and quick mounting on walls or ceilings is possible. Existing drill holes can be used for mounting and the luminaire can be fixed along its entire length.

Alternatively, use suitable fixing material according to the **industry standard Ø 50 mm**.

For more security and **theft protection**, mounting with stainless steel clamps is possible.

Ceiling illumination

With the circumferential polycarbonate cover a particularly wide emission characteristic is favoured which illuminates the ceiling at the same time.

D-marking

For fire hazardous premises.

360° rotatable

Direction of beam freely adjustable.

The proven TUBOLA is now also available in a warm white version. The light colour of **TUBOLA W3** can be changed with a slide switch between

2400 K 2700 K 3000 K

and lets your surroundings shine in a stylish light.

TUBOLA X

For even more application options, TUBOLA DALI and TUBOLA PLUS DALI are now also available as X-version with PMMA housing.

The PMMA housing has a high rigidity and a high degree of hardness, which leads to a low scratch sensitivity. In addition, the lamp is UV-resistant and shatterproof. The optimum light resistance and excellent light transmission also speak in favor of the material.

The lamp is not only suitable for unprotected outdoor areas, but is also resistant to many acidic and alkaline cleaning agents. In addition, the lamp offers an ideal solution for electroplating shops, rubber production or for tire storage.

The TUBOLA X is a particularly durable lamp that can withstand even the most difficult environments.

IndustryLUX FARO X3 75°

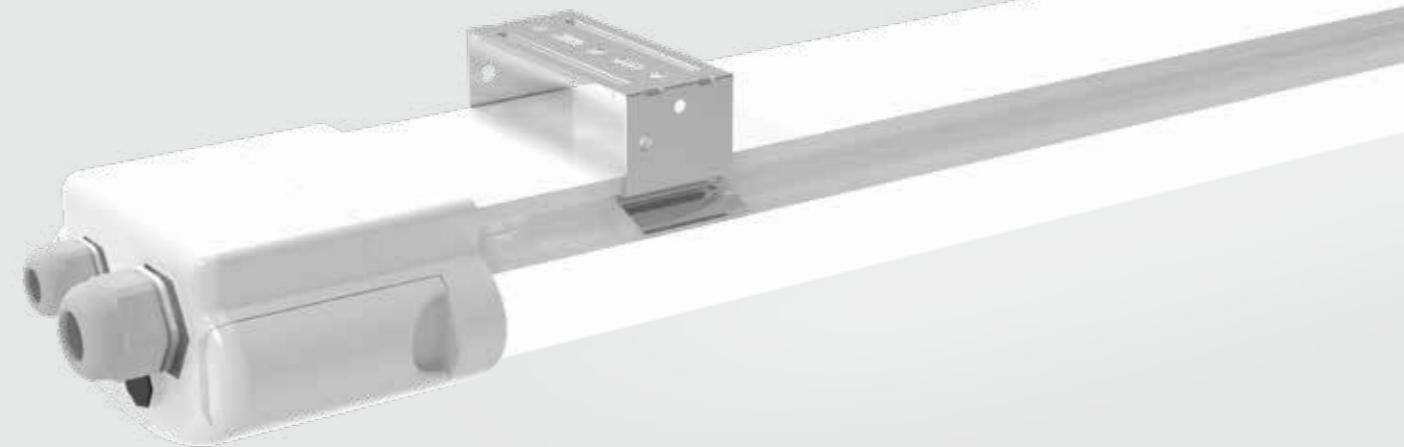

IndustryLUX FARO X3 140°

IndustryLUX FARO X3 75°

With the 75° version, particularly large heights can be achieved and, for example, test stations can be optimally illuminated.

IndustryLUX FARO X3 HTS DALI

Now also suitable for use in sulphurous environments and at high temperatures up to 60°C.

**Assembly****Quick mounting with Easy-Clip-System**

Due to the enclosed fixing clips with locking screw, mounting on walls and ceilings is done in no time. The existing drill holes can be used for easy mounting and the luminaire can thus be flexibly fixed along its entire length. Alternatively, the supplied mounting brackets can be used for suspension.

**Foodready**

In addition to uniform light distribution thanks to the prismatic PC cover, this shatterproof material enables use in the food sector.

DIP-Switch

50 | 75 | 100% light intensity, optimised for project solutions. Flexible replacement for T5 and T8 moisture-proof luminaires.

**Further advantages**

- Constructed for **easy cleaning** and few dirt edges
- **Impact resistant** due to IK08
- **Can be mounted through-wired on one & both sides**
- **Easy connection:** can be opened and connected without tools

Ceiling illumination

With the wide and flat polycarbonate cover, a particularly wide beam pattern is favoured, emitting part of the light to the ceiling.

Polar distribution curve**Assembly**

Due to the **fastening clamps made of stainless steel (V2A)** a simple and fast installation on the wall or ceiling is possible. Existing drill holes can be reused for the installation and the luminaire can be fastened over its entire length.

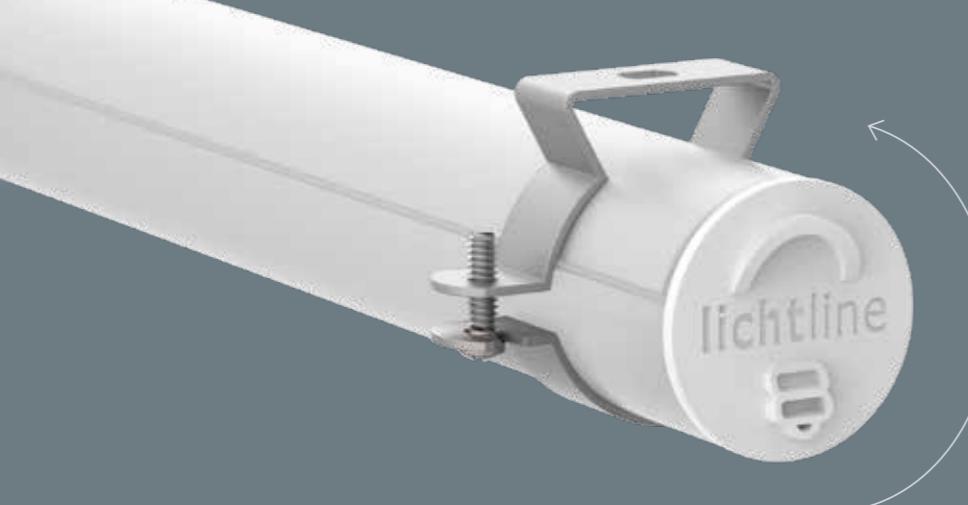

Alternatively, suitable fixing material according to the **industry standard Ø 50 mm** can be used.

**360° rotatable**

Direction of beam freely adjustable.

Flicker-free**Quality light**

With the circumferential PMMA cover a homogeneous dispersion characteristic is favoured.

7 resistances against

- 1. Ammonia**
for use in agriculture
- 2. Aerosole**
for use in chemically contaminated environments
- 3. Heat**
for use up to 50°C ambient temperature
Disinfectants
- 4. Dust**
for use under particle load
- 5. Desinfectants and cleaning**
for use in hospitals and food industry
- 6. Sulphur**
for use in rubber production and storage
- 7. Water**
for use in high pressure or steam jet cleaning

Quick mounting with Easy-Clip-System

Because of the enclosed mounting clips with locking screw, mounting on walls and ceilings is done in no time. The existing drill holes can be used for easy mounting and the luminaire can thus be flexibly fixed along its entire length. Alternatively, the supplied mounting brackets can be used for suspension.

Pressure compensation via membrane

In the event of rapid temperature changes in damp rooms, a special membrane prevents the formation of condensation.

Ball proof

The Lanara 2.0 is also ideally suited for use in sports halls due to its robust body - completely without metal cage.

50 | 75 | 100 %

The power can be set in three stages via the integrated DIP switch and the light intensity can thus be optimally adjusted to the lighting situation.

Accessories

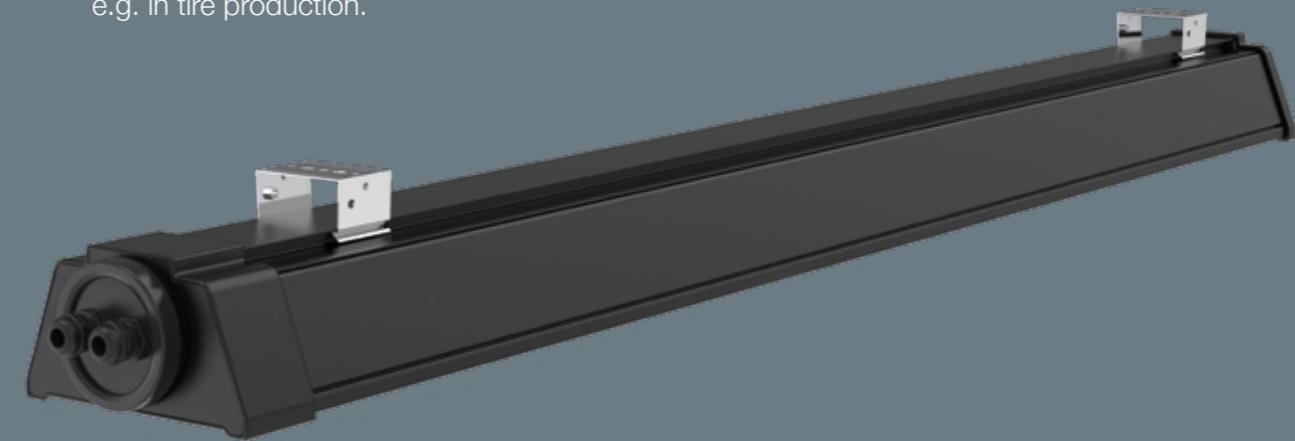

Mounting plate

Combine up to three individual LANARA 2.0 for up to **67,500 lm**.

Now even more resistant!

LANARA 2.0 S for safe use in sulfur-contaminated environments, e.g. in tire production.

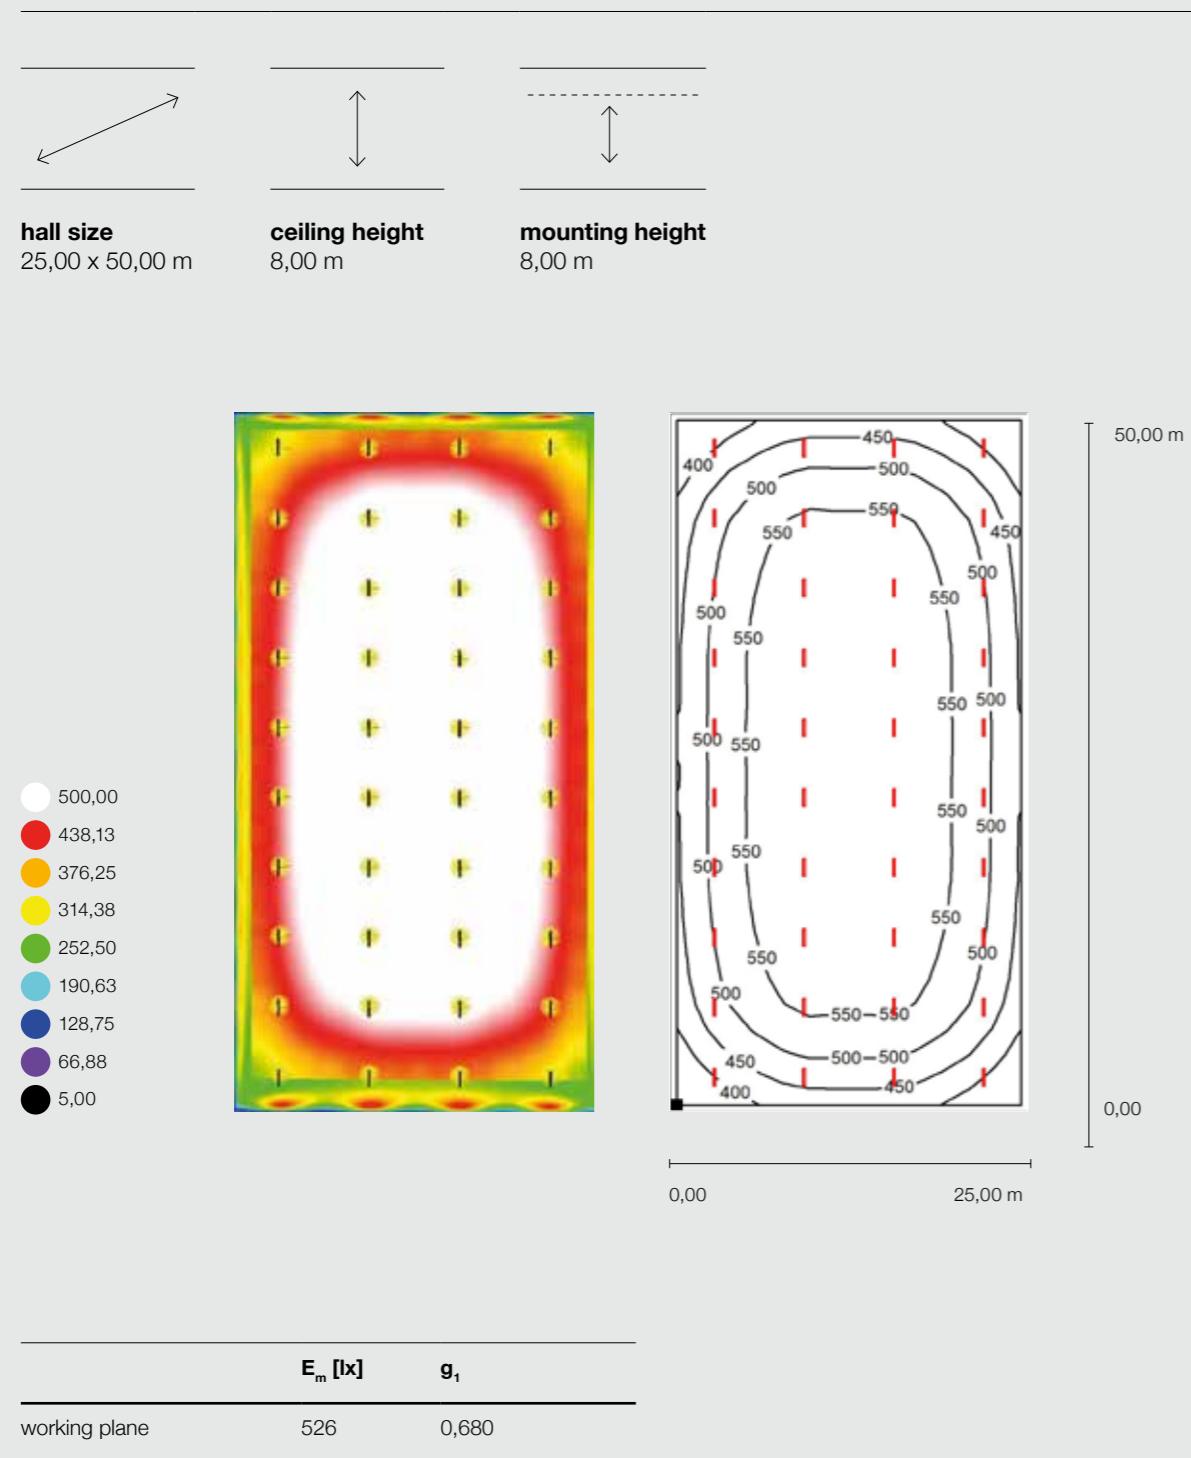

Through wiring on one side

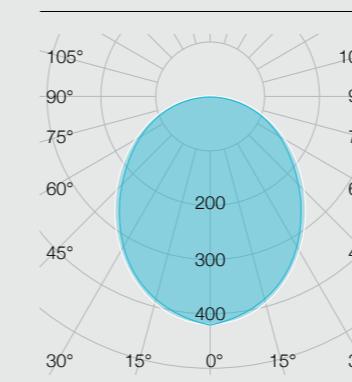

Thanks to through-wiring and tool-free connection, installation costs are reduced to a minimum.

Foodready

High-quality materials enable **time-saving and efficient cleaning**, making the LANARA 2.0 perfect for use in the food industry.

IndustryLUX HEMERA 2.0 80°

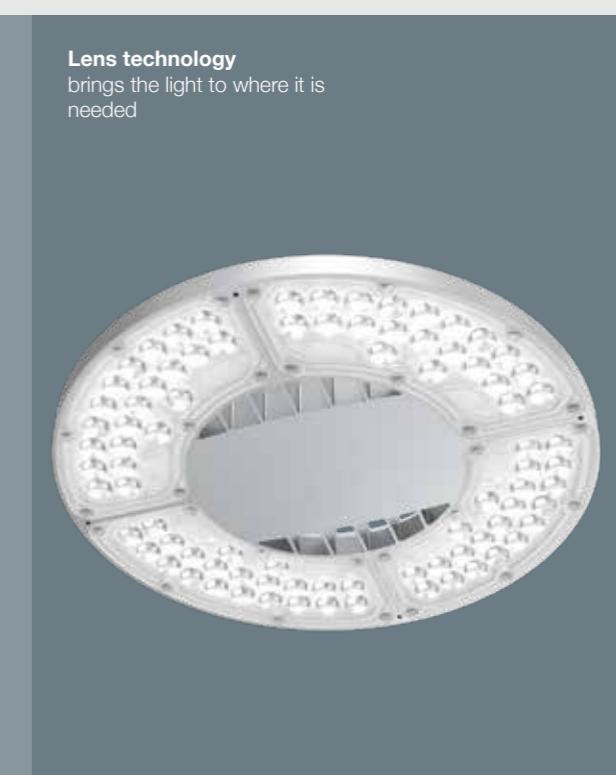

**Lots of light - little glare**

Do you want maximum illumination and minimum glare? Then our IndustryLUX HEMERA 2.0 is the solution. Thanks to the lens technology, a pleasant, low-glare light is created with high uniformity at the same

time. Sufficient brightness and visual comfort are also available at higher altitudes. With UGR < 22, the HEMERA 2.0 is particularly suitable for corridors and traffic routes.

Product features at a glance

Outdoor lighting

Rain, snow, extreme sunlight and numerous other conditions call for a robust outdoor lighting system. The weatherproof outdoor luminaires from lichtline are perfect for use on access roads, loading zones, car parks, open spaces and wherever safe routing is enormously important. They are energy-saving, easy to maintain and provide reliable illumination of traffic and work-related areas. This not only ensures a safe working environment, but also reduces the risk of vandalism at night.

- Car parks
- billboards
- aircraft hangars

powerful illumination

even from great heights

can be used for
indoor and unprotected outdoor areas

Highlights

improved efficiency

versatile use

due to different beam angles

glass light field cover

extends the application possibilities

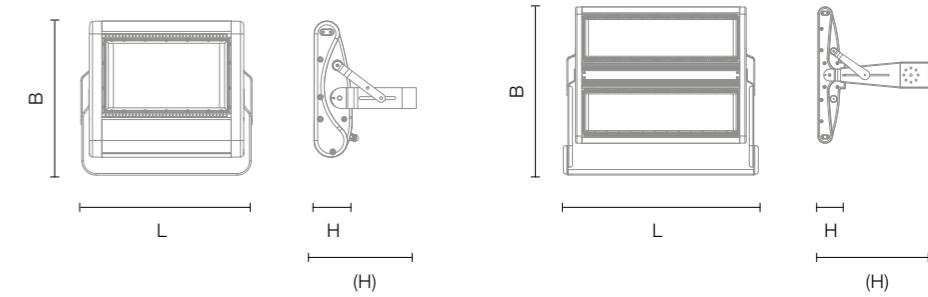

less light pollution

due to optimal alignment of light

DALI and other light colours on request

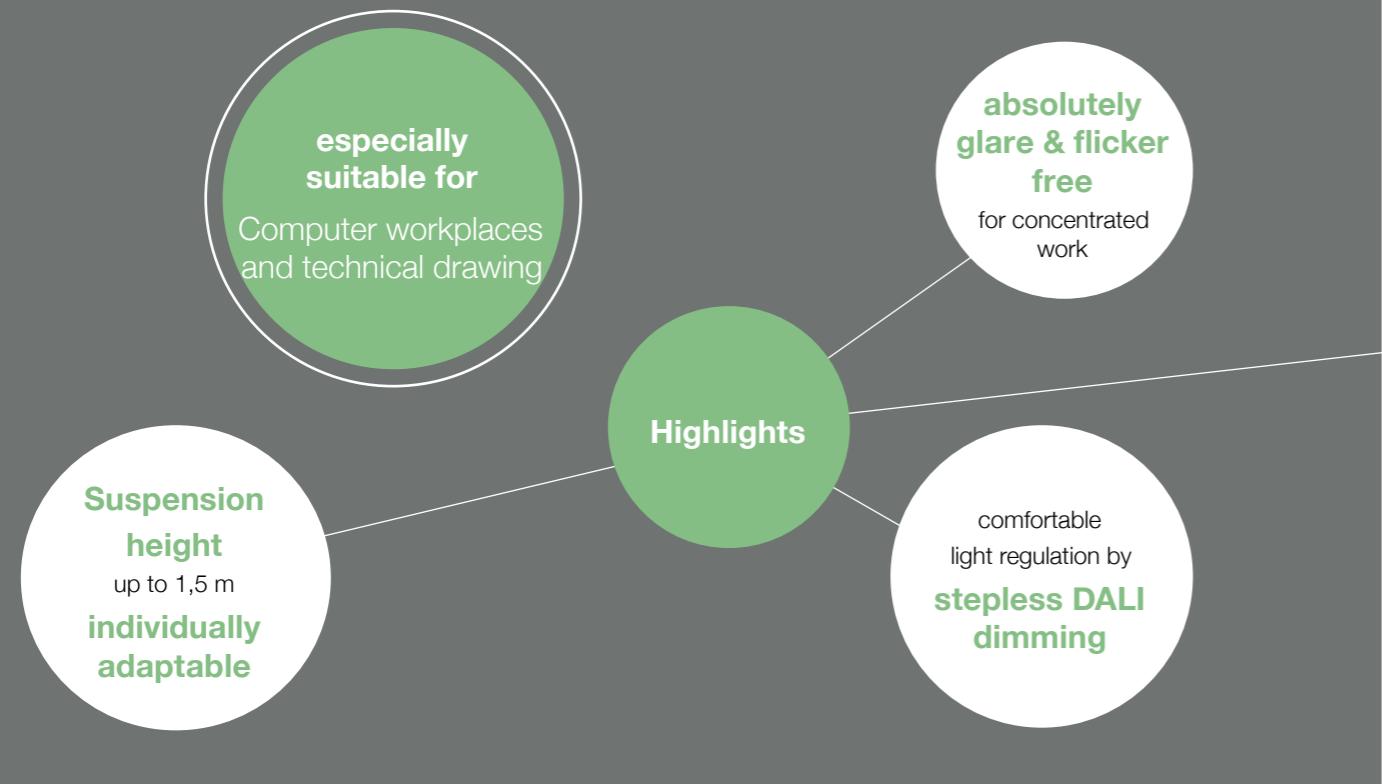

Office luminaires

Optimal illumination of office spaces makes a valuable contribution to the concentration and well-being of employees. Thanks to low-glare light, which is very similar to the natural light spectrum, our OfficeLUX luminaires provide pleasant and productive lighting.

Recessed & Surface luminaires

Our recessed and surface-mounted luminaires hardly stand out from the ceiling due to their low mounting height and are therefore used in an extremely flexible and spacesaving manner. Because of the simple installation, the homogeneous illumination and the modern design, the luminaires are equally suitable for large-area lighting.

Assembly

Whether in the sanitary area or in the stairwell - the flexible options of InteriorLUX for use on the ceiling or wall make planning and installation fun. In addition to the easy installation, the InteriorLUX also shines with its homogeneous light distribution and the adjustable light color.

**Many moods in one product**

Whether cozy or productive - the K3 function of the InteriorLUX ensures the right light in every situation. This can be easily selected using the integrated switch. Only one item needs to be ordered. Nevertheless, depending on the room situation, it can be decided on site whether concentration-promoting daylight or relaxing light in a warm white color should be preferred.

LED-Tubes

The **lichtline** LED tubes convince with an exceptionally high luminous efficacy at differentiated color temperatures from 2700 K to 6500 K. The LED tubes achieve their service life of more than 50,000 hours, among other things, through aluminum heat sinks for effective heat dissipation. These illuminants convince with high-quality light and are therefore suitable as a replacement for any conventional fluorescent tube.

Sensors

Today's building is not only becoming more and more digital, but also more and more intelligent. With smart sensor technology, we open up completely new possibilities for you. Reduce your energy and building costs to a minimum, ensure more security and increase your comfort at the same time. With our partner "Steinel" we create an intelligent combination of lights and sensors and thus your lighting solution for the future.

Service

lichtline stands for innovation, technology and sustainability. For competence and know-how. For advice and analysis. For high-quality products and the best service.

In our service section we give you a little insight into the most important symbols, types of protection, resistances and much more. You can also find contact information here.

Because of our many years of experience, we offer you comprehensive support. Our experts in Germany, Austria and Switzerland are at your disposal for all questions relating to light. Contact us by phone or email so we can discuss your questions and inquiries.

Explanation of symbols	194

IP Protection types	196
Color temperature	198
Resistance table	200
Contact	204

Explanation of Symbols

The CE marking is a self-declaration by the manufacturer that the product complies with EU harmonized regulations.

Products tested within the meaning of the Product Safety Act in accordance with VDE/ EN-/ IEC standards, other technical regulations and any legal provisions with regard to safety and health requirements.

Luminaire with limited surface temperature, suitable for use in fire hazardous locations. This applies, for example, to rooms with combustible dust or to mounting on wooden surfaces.

DALI stands for "Digital Addressable Lighting Interface" and is a protocol for controlling luminaires and lighting control gear in building automation.

The luminaire is dimmable.

The luminaire is not dimmable.

Use only in dry indoor areas.

ENEC (European Norms Electrical Certification) is a test mark awarded by independent testing institutes approved by CENELEC and is accepted and recognized throughout Europe. The ENEC mark ensures that the product complies with the requirements of European safety standards.

Indicates that the protective insulation corresponds to protection class II according to (VDE 0100, part 410, 412.1). This is equipment with reinforced or double insulation between active and touchable parts.

Indicates that, in addition to the basic insulation of all active parts, all conductive parts of the equipment are grounded via a protective conductor on the mains side. This is called protection class I.

Food ready:
The luminaire is suitable for use in the food sector. It is easy to clean and unbreakable, so there is no risk of splinters or fragments.

The luminaire is ball-proof according to DIN 18032, Part 3 and may be used in sports facilities. Accordingly, the individual elements must remain undamaged despite the impact.

LEDs basically produce bundled light. The point in the light cone at which exactly half of the maximum emitted luminous intensity is still guaranteed is defined as the beam angle. It is therefore also referred to as the half-value angle.

Adjustable via DIP or slide switch

Suitable for use in emergency power systems

The lamp is equipped with a PIR sensor (Pyroelectric Infrared Sensor) or an HF sensor (High Frequency Sensor) to detect movement or thermal radiation.

The light color of a lamp is described by the color temperature in Kelvin (K). The higher the temperature, the whiter the color becomes.

There is a special emergency version for these luminaires.

IK Classes

Impact resistance grade
The housing withstands an impact energy of at least 0.35 joules.

Impact resistance grade
The housing can withstand an impact energy of at least 1 joule.

Impact resistance grade
The housing can withstand an impact energy of at least 0.5 joules.

Impact resistance grade
The housing can withstand an impact energy of at least 5 joules.

Impact resistance grade
The housing can withstand an impact energy of at least 0.7 joules.

Impact resistance grade
The housing can withstand an impact energy of at least 20 joules.

IP65

Digit 1
Contact protection

Digit 2
Water protection

Explanation**Digit 1**

0 No foreign body protection

1 Protection against penetration of solid foreign bodies with a diameter >50 mm

2 Protection against penetration of solid foreign bodies with a diameter >12,5 mm

3 Protection against penetration of solid foreign bodies with a diameter >2,5 mm

4 Protection against penetration of solid foreign bodies with a diameter >1 mm

5 Protection against harmful dust deposits inside the device

6 Protection against ingress of dust (dust-tight)

Digit 2

0 No protection against water penetration

1 Protection against vertically dripping water

2 Protection against dripping water falling obliquely (with 15° inclination)

3 Protection against splashing water (inclined up to 60°)

4 Protection from splashing water

5 Protection against water jets from all directions

6 Protection against strong jets of water

7 Protection against water penetration in the event of brief immersion

8 Protection against water penetration in case of continuous immersion

9 Protection against water penetration, even at high pressure (high-pressure cleaner)

! Our light dictionary

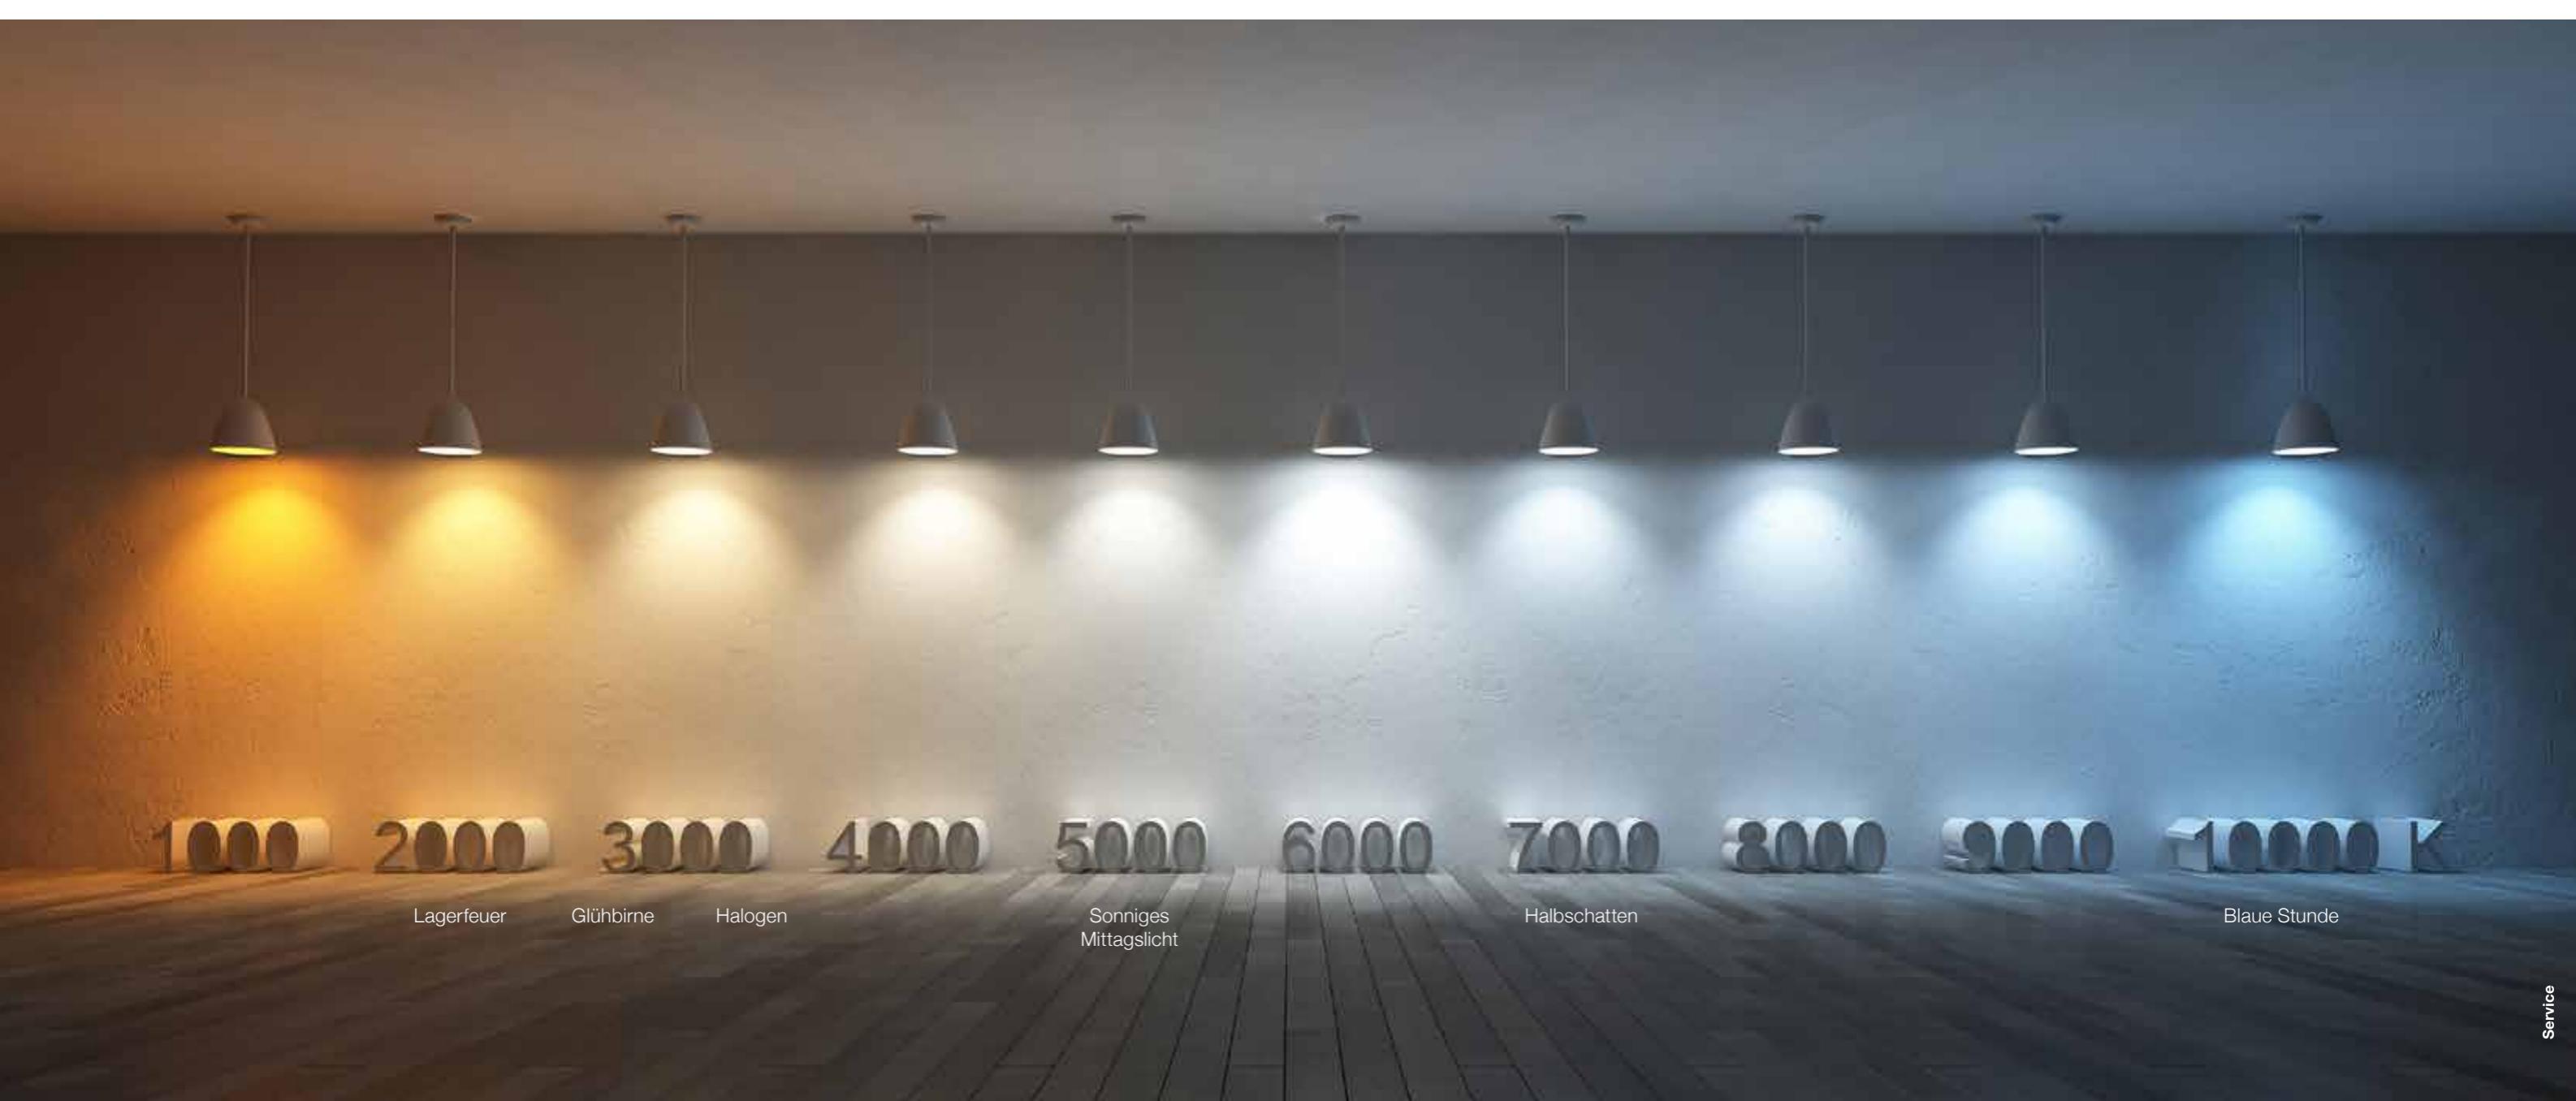

- Further information on the subject of light can be found in our [light dictionary](#).

Color temperature

Light is an essential part of our lives and makes a decisive contribution to our well-being and performance. In this context, it is not only the brightness that matters, but above all the light temperature. This can be explained by the connection between color temperature and time of day, which has been established for thousands of years.

Especially in times of ever faster progress, we are able to provide the right light for every situation. Whether simple glow or extravagant play of light - with innovation and creativity we can put not only your projects, but also those of your target group in the right light.

Resistance table

In order to be able to use our luminaires in a wide variety of applications, including demanding ones, each component must meet the appropriate resistance requirements. Below we have listed the resistance of the component materials to common chemical substances.

Product	Material
ClickLUX 2.0	Aluminium, PC
ClickLUX ROCKET	Aluminium, PC
DeLUX SPLASH	PC, PA66 (screws)
IndustryLUX FARO X3	PC, PA66 (screws)
IndustryLUX FLAT	Aluminium, PA66 (screws)
IndustryLUX LANARA 2.0	Aluminium, PC, PA66 (screws)
IndustryLUX RESIST	Aluminium, PC, nickel plated brass (screws)
IndustryLUX TUBOLA	PC, PA66 (screws)
IndustryLUX TUBOLA X	PMMA, PA66
7PROOF	PMMA, PUR (wiring)
Accessories	
Halteclips ClickLUX 2.0 / ROCKET	V2A
Halteclips IndustryLUX TUBOLA standard	PA66
Halteclips 7PROOF / IndustryLUX TUBOLA metal	V2A

Our AGB

A close-up photograph of a glowing mushroom-like light fixture in a dark, forested environment. The light fixture has a thin, vertical stem and a wide, shallow, circular shade that glows with a warm, yellowish-orange light. It is positioned on a dark, textured surface, possibly a rock or a fallen log. In the background, there are blurred lights and shapes, suggesting a forest at night.
